PATENT PENDING

Real Time Guard Tour System

- Real Time Data Transmission by GSM
- Panic Button for Loan Worker Protection
- 2 Way Control Room radio link
- Reduces equipment cost - 3 devices in one
- Uses RFID checkpoints
- Built-in Voice Communications

ActiveGuard

The first patrol system in the world to combine 3 devices in 1:

- **Guard Tour** – The ActiveGuard Patrol System enables full monitoring of mobile worker time and attendance in Real Time. All data is transmitted through GSM network.
- **Lone Worker** – The PANIC button allows immediate communication with the control room in case of emergency tremendously improving the security of your employees.
- **Radio** – The control room can also keep Two-way voice communication with employee in order to reassure that assistance is at hand.

Two-way voice communication

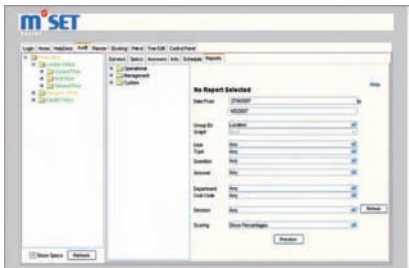

- ActiveGuard users cannot make a call to the control room although they can let the operator know they need voice connection by pressing “call me” button.
- The monitoring station operator can call ActiveGuard anytime in the same way as a GSM phone (this feature cuts costs of phone calls).
- Each ActiveGuard unit is programmed to answer calls only from defined phone numbers.
- Direct calls from ActiveGuard are blocked.

M-Set Patrol

An infinitely scalable way of assuring patrol verification from less than £2 per day

In order to satisfy the requirements of our larger corporate clients where numerous stakeholders need to access patrol data quickly and easily, M-Set Technologies have recently launched their latest web based enterprise software solution **M-Set Patrol**.

M-Set Patrol is a revolutionary new software solution that leverages the power of the internet to provide the ultimate in patrol verification systems. The very latest in programming technologies is utilised (SQL server/ASP.net) to enable complete patrol transparency throughout your enterprise.

Unlike any other products available, the data held within M-Set Patrol is saved to a dedicated remote server and is completely separate from the PC on which you are working. This provides numerous key advantages:

Anytime, anyplace, anywhere!

Live data

Security

Back-ups

- M-Set Patrol can be accessed via any computer with an Internet connection, 24/7. This allows users to work from home at a moment's notice and access information at multiple sites within the company (subject to privileges) from one computer.
- All information is completely up-to-date at all times, allowing instant appraisal of Patrol or Audit data from any site, from any location.
- As no data is stored locally, your information is never at risk from any of the events that can interfere with business in the office - a hardware failure has no impact; whether from a virus or power surge. In any circumstance you can simply move to another PC and carry on working effectively!
- With any other Patrol Management Software, the responsibility for backing-up data lies with the user. This often results, in the event of a system failure, in the loss of data entered since the last back-up was performed. M-Set Patrol is backed up every 15 minutes, with no intervention from the user.
